INTRODUCTION

Isoprostanes are prostaglandin-like compounds that are produced by free radical mediated peroxidation of lipoproteins. This kit is for the quantification of 15-isoprostane F_{2t} (also known as 8-epi-$PGF_{2\alpha}$ or 8-iso-$PGF_{2\alpha}$) in urine samples. Levels of 15-isoprostane F_{2t} in urine are useful for the non-invasive assessment of oxidant stress *in vivo*. 15-isoprostane F_{2t} has also been shown to be a potent vasoconstrictor in rat kidneys and rabbit lungs and plays a causative role in atherogenesis. Elevated isoprostane levels are associated with hepatorenal syndrome, rheumatoid arthritis, atherosclerosis, and carcinogenesis.

PRINCIPLES OF PROCEDURE

This Urinary Isoprotane ELISA kit is a competitive enzyme-linked immunoassay (ELISA) for determining levels of 15-isoprostane F_{2t} (the best characterized isoprostane) in urine samples. Briefly, urine samples are mixed with an enhanced dilution buffer that essentially eliminates interference due to non-specific binding. The 15-isoprostane F_{2t} in the samples or standards competes with 15-isoprostane F_{2t} conjugated to horseradish peroxidase (HRP) for binding to a polyclonal antibody specific for 15-isoprostane F_{2t} coated on the microplate. The HRP activity results in color development when substrate is added, with the intensity of the color proportional to the amount of 15-isoprostane F_{2t}-HRP bound and inversely proportional to the amount of unconjugated 15-isoprostane F_{2t} in the samples or standards.

MATERIALS PROVIDED

Component	Contents	Quantity	Storage
Coated Plate	Anti-15-Isoprostane F_{2t} coated 96-well plate	1	4°C
Standard	15-Isoprostane F_{2t} standard (1 µg/mL)	2 x 60 µL	4°C
Enhanced Dilution Buffer	General buffer for diluting assay components	100 mL	4°C
Wash Buffer	5x solution for washing plate	40 mL	4°C
Substrate	TMB Substrate	25 mL	4°C
HRP Conjugate	15-Isoprostane F_{2t} HRP conjugate	250 µL	4°C
Glucuronidase	ß-Glucuronidase for sample pretreatment	2 x 100 µL	4°C

MATERIALS NEEDED BUT NOT PROVIDED

1. Adjustable pipettes (10-1,000 µL) and disposable tips
2. Microcentrifuge tubes
3. Beakers, flasks, and cylinders as necessary for preparation of reagents
4. Microplate reader with 450 nm filter
5. Deionized Water
6. 3 M Sulfuric Acid

It is recommended that urine samples be normalized to creatinine or a comparable biomarker to allow reasonable sample-to-sample comparison of urinary 15-isoprostane F_{2t} values. Please inquire about our Creatinine Assay Kit (catalog number CRE34-K01).

STORAGE CONDITIONS

1. Store this kit and its components at 4°C until use.
2. Do not freeze.

WARNINGS AND PRECAUTIONS

1. Use aseptic technique when opening and dispensing reagents.
2. This kit is designed to work properly as provided and instructed. Additions, deletions, or substitutions to the procedure or reagents are not recommended, as they may be detrimental to the assay.
3. Exercise universal precautions during the performance or handling of this kit or any component contained therein.

PROCEDURAL NOTES

1. Reagents can be used immediately upon removal from refrigeration.
2. Performance of the entire kit at once is not required. When performing this kit in part, please adhere to the following:

   -All unused components should be returned to storage at 4°C.

   -Unused portions of the Microplate should be returned to the zip lock pouch with desiccant prior to storage at 4°C.

   -The Isoprostane HRP Conjugate is most stable at the stock concentration as provided; use only the appropriate amount of this stock and store remaining for subsequent uses.

   -Create a standard curve for each performance of the assay. Two vials of Standard are provided for added ease and convenience of use.

   -Each vial of ß-Glucuronidase is sufficient for treating 20 samples.
3. To minimize error due to handling, wipe the exterior bottom of the microplate wells with a lint-free paper towel.

SAMPLE COLLECTION AND PREPARATION

This kit is designed for extraction-free analysis of urine or like media. Samples such as plasma, serum, tissues, and cultures should employ the use of Eagle Biosciences, Inc. product number 15I39-K01.

Sample collection and preparation is subject to the discretion and approval of the principal investigator.

Spot or 24-hour urine should be collected then aliquotted and stored immediately at –80°C. Additives such as 0.02% thimerosal and 0.005% BHT may be used as preservatives where applicable but is typically not required.

REAGENT PREPARATION

1. **5x Wash Buffer:** Dilute to 1 x with deionized water and mix prior to use.
2. **15-isoprostane F_{2t} HRP Conjugate**: Dilute 1:50 with Enhanced Dilution Buffer. For performance of the entire assay at once, add 240 µL of conjugate to 11.76 mL of Enhanced Dilution Buffer.

SAMPLE PREPARATION

Eagle Biosciences has found that an average of 50% of the isoprostane excreted in human urine is conjugated to glucuronic acid. The extent of glucuronidation among individuals ranges significantly from 28% to 80%. In light of this information it is strongly recommended that specimens be pretreated with ß-Glucuronidase prior to analysis to provide a more accurate assessment of oxidative stress. This kit provides sufficient materials and methods for the

treatment of 40 samples allowing the user to differentiate the inter-individual differences in glucuronidation and measure the total systemic isoprostane output. If interested only in free isoprostane, do not treat samples with glucuronidase.

ß-Glucuronidase Treatment

1. For every 100 µL of urine to be assayed, add 5 µL of Glucuronidase. Seal tube and vortex to mix.
2. Incubate the mixture at 37°C for 2 hours.
3. Your sample is now ready to dilution and assay. Alternatively, the samples may be frozen at –70°C and assayed at a later date.

Samples should be diluted with Enhanced Dilution Buffer prior to assay. A recommended starting dilution is 1:4, regardless of pretreatment.

STANDARD PREPARATION

The 15-isoprostane F_{2t} Standard is provided as a 1 μg/mL stock solution. Use the following table to construct an eight-point standard curve.

Table 1: Preparation of Standard Curve

Standard	15-Isoprostane F_{2t} Concentration (ng/mL)	Enhanced Dilution Buffer (µL)	Transfer Volume (µL)	Transfer Source	Final Volume (µL)
S_7	100	450	50	Standard Stock	300
S_6	50	200	200	S_7	300
S_5	10	400	100	S_6	300
S_4	5	200	200	S_5	300
S_3	1	400	100	S_4	400
S_2	0.1	900	100	S_3	500
S_1	0.05	500	500	S_2	1,000
B_0	0	300	---	---	300

ASSAY PROCEDURE

1. Add 100 µL of Standards or diluted unknowns to each well. A recommended sample dilution is 1:4 with Enhanced Dilution Buffer. See Scheme I for a suggested plate layout.
2. Add 100 µL of diluted 15-isoprostane F_{2t} HRP Conjugate to each well omitting the Reagent Blank (RB). Add 100 µL of Enhanced Dilution Buffer in lieu of Conjugate in the Reagent Blank. Incubate the plate for 2 hours at room temperature.
3. Wash wells according to the following wash procedure:
   a. Remove the contents of each well by inversion of the plate.
   b. Tap out the remaining contents of the plate onto a lint free paper towel.
   c. Add 300 µL of 1x Wash Buffer.
   d. Let stand for 2-3 minutes.
   e. Repeat procedure two more times, then proceed to step "f".
   f. Remove the contents of each well by inversion of plate into an appropriate disposal device.

g. Tap out the remaining contents of the plate onto a lint free paper towel, then proceed to step 4.

4. Add 200 µL of TMB Substrate to each well.
5. Incubate for 20 – 40 minutes until an appreciable blue hue is observed for the B_0.
6. Add 50 µL of 3 M Sulfuric Acid to each well to stop the reaction. The color with change from blue to yellow.
7. Read the plate at 450 nm.

   NOTE: The plate can be alternatively read at 650 nm in the absence of the addition of 3 M Sulfuric Acid in step 6 above.

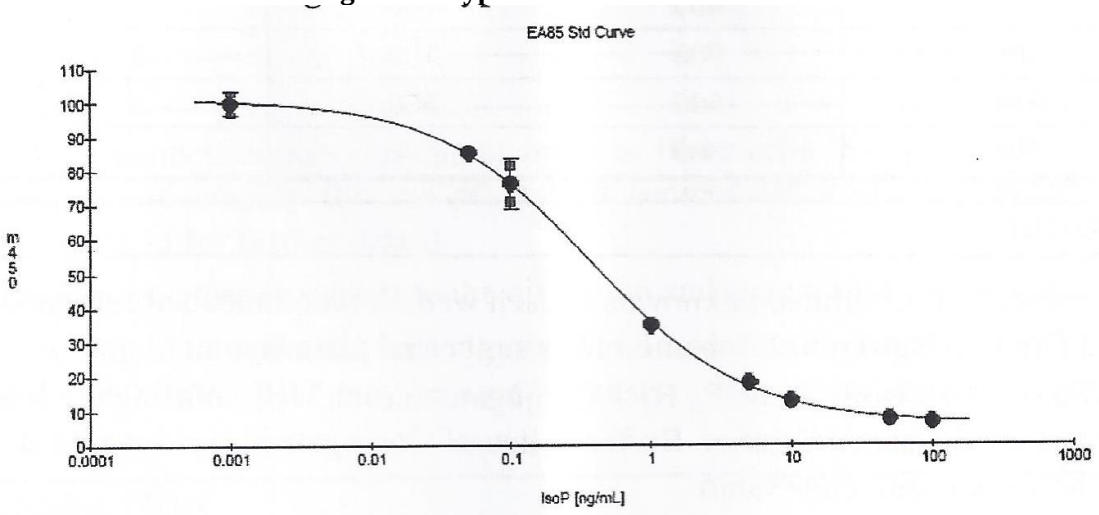
Scheme I:

	1	2	3	4	5	6	7	8	9	10	11	12
A	S_7	S_7	U_1	U_1	U_9	U_9	U_{17}	U_{17}	U_{25}	U_{25}	U_{33}	U_{33}
B	S_6	S_6	U_2	U_2	U_{10}	U_{10}	U_{18}	U_{18}	U_{26}	U_{26}	U_{34}	U_{34}
C	S_5	S_5	U_3	U_3	U_{11}	U_{11}	U_{19}	U_{19}	U_{27}	U_{27}	U_{35}	U_{35}
D	S_4	S_4	U_4	U_4	U_{12}	U_{12}	U_{20}	U_{20}	U_{28}	U_{28}	U_{36}	U_{36}
E	S_3	S_3	U_5	U_5	U_{13}	U_{13}	U_{21}	U_{21}	U_{29}	U_{29}	U_{37}	U_{37}
F	S_2	S_2	U_6	U_6	U_{14}	U_{14}	U_{22}	U_{22}	U_{30}	U_{30}	U_{38}	U_{38}
G	S_1	S_1	U_7	U_7	U_{15}	U_{15}	U_{23}	U_{23}	U_{31}	U_{31}	U_{39}	U_{39}
H	B_0	B_0	U_8	U_8	U_{16}	U_{16}	U_{24}	U_{24}	U_{32}	U_{32}	RB	RB

CALCULATIONS

1. Average the Reagent Blank (RB) absorbance values and subtract this average from the value obtained for all other wells. Most modern microplate readers are capable of doing this automatically.
2. Average replicates of each Standard S_1 through S_7. Divide each average by the mean B_0 value and multiply the result by 100 to obtain $\%B_0$ values.
3. Graph $\%B_0$ values (y-axis-linear) vs. standard concentration (x-axis-logarithmic) to obtain a standard curve. Figure 1 is a Typical Standard Curve, which plots concentration vs. absorbance.
4. Average the replicates of each unknown and divide by the average B_0 value to obtain $\%B_0$, then determine corresponding concentration using the standard curve and account for dilution factors.

Figure 1: Typical Standard Curve



Typical B/B_0: 20% - 3.5 ng/mL; 50% - 0.45 ng/mL; 80% - 0.08 ng/mL

PERFORMANCE CHARACTERISTICS

Cross reactivity at 50% B/B_0

15-isoprostane F_{2t}……..	**100.0%**
9α,11β-PROSTAGLANDIN $F_{2\alpha}$ ……..	4.1%
13,14-DIHYDRO-15-KETO-$PGF_{2\alpha}$……	3.0%
9β,11α-PROSTAGLANDIN $F_{2\alpha}$……	<0.01%
PROSTAGLANDIN $F_{2\alpha}$……..	<0.01%
6-KETO-PROSTAGLANDIN $F_{1\alpha}$……..	<0.01%
PROSTAGLANDIN E_2……..	<0.01%
PROSTAGLANDIN D_2……..	<0.01%
ARACHIDONIC ACID……..	<0.01%

VALIDATION

The concentrations of 15-isoprostane F_{2t} in several human urine samples were determined by immunoassay and by GC/MS following solid phase extraction of separate aliquots, and a correlation (r^2) of > 0.8 was obtained (Figure 2).

Warranty

Eagle Biosciences, Inc. warrants its Product(s) to operate or perform substantially in conformance with its specifications, as set forth in the accompanying package insert. This warranty is expressly limited to the refund of the price of any defective Product or the replacement of any defective Product with new Product. This warranty applies only when the Buyer gives written notice to the Eagle Biosciences within the expiration period of the Product(s) by the Buyer. In addition, Eagle Biosciences has no obligation to replace Product(s) as result of a) Buyer negligence, fault, or misuse, b) improper use, c) improper storage and handling, d) intentional damage, or e) event of force majeure, acts of God, or accident.

Eagle Biosciences makes no warranties, either expressed or implied, except as provided herein, including without limitation thereof, warranties as to marketability, merchantability, fitness for a particular purpose or use, or non-infringement of any intellectual property rights. In no event shall the company be liable for any indirect, incidental, or consequential damages of any nature, or losses or expenses resulting from any defective product or the use of any product. Product(s) may not be resold, modified, or altered for resale without prior written approval from Eagle Biosciences, Inc.

For further information about this kit, its application or the procedures in this kit insert, please contact the Technical Service Team at Eagle Biosciences, Inc. at info@eaglebio.com or at 866-411-8023.
