Quantification of functional IL-6 using
**iLite®** IL-6 Assay Ready Cells

For research and professional use only. Not for use in diagnostic procedures.

This application note contains a suggested protocol and performance data. Each individual laboratory must set up their own method and perform relevant validations.

**Background**
Interleukin-6 (IL-6) is a member of the cytokine family. It is found relevant to many inflammatory diseases and many cancers and can act as both a pro-inflammatory cytokine and an anti-inflammatory myokine. In classic signaling, IL-6 stimulates target cells via a membrane-bound interleukin-6 receptor (IL-6R), which upon ligand binding associates with the signaling receptor protein gp130. The anti-inflammatory activities of IL-6 are transmitted by this signaling pathway whereas pro-inflammatory responses of IL-6 are mediated by trans-signaling (cells expressing only gp130 respond to a complex of IL-6 bound to a soluble form of the IL-6R). This is important since therapeutic inhibition of IL-6 by the neutralizing anti-IL-6R monoclonal antibody has been focused on the treatment of inflammatory diseases (1).

**Principle of the assay**
The **iLite®** IL-6 Assay Ready Cells are engineered cells optimized to express Firefly luciferase under the control of a IL-6 responsive promoter. Binding of IL-6 to the membrane-bound IL-6 receptor (IL-6RA and IL6ST) results in activation of the IL-6 regulated Firefly luciferase reporter gene construct. **iLite®** IL-6 Assay Ready Cells also contain the Renilla Luciferase (RL) reporter gene, under the control of a constitutive promoter. The constitutive expression of RL allows normalization of IL-6 induced FL activity, and renders assay results independent of variations in cell number or serum matrix effects. The luciferase signal can be measured in a luminometer following addition and incubation of luciferase substrate. The Firefly luciferase signal is proportional to the concentration of functional IL-6 in a sample (Fig.1).

**Specimen collection**
The **iLite®** IL-6 Assay Ready Cells can be used for measuring concentration of IL-6 in test samples including human serum.

Protocol

Preparation of calibrators (IL-6)
Recombinant IL-6 from R&D Systems has successfully been used to stimulate the *iLite®* IL-6 Assay Ready Cells. The below table shows the dilutions of IL-6, used for QC release of the *iLite®* IL-6 Assay Ready Cells.

**Incubation**
1. Design a plate layout. It is recommended to perform the test at least in duplicates.
2. Dilute calibrators, controls and samples to fall within the expected in assay values of 0-20 000 pg/mL.
3. Add 40 µL calibrators, controls and samples in duplicate to assigned wells (final concentration will be half of solution concentration).
4. Thaw the vial of *iLite®* IL-6 Assay Ready Cells in a 37°C water bath with gentle agitation. The cell suspension is mixed very carefully ten times with pipette to ensure a homogeneous distribution of cells.
5. Dilute 250 µL cell suspension with 5.75 mL Diluent.
6. Add 40 µL diluted cells to each well.
7. Place the lid on the plate, mix and incubate for 6 hours at 37 °C with 5% CO₂.

**Adding substrate solutions**
8. Equilibrate the plate and the substrate solution to room temperature.
9. Prepare the **Firefly luciferase** substrate according to the suppliers instructions and add 80 µL per well. Mix and protect the plate from light. After 10 minutes incubation at room temperature read in a luminometer.
10. If appropriate, prepare the **Renilla luciferase** substrate according to the suppliers instructions and add 80 µL per well. Mix and protect the plate from light. After 10 minutes incubation at room temperature read in a luminometer.

**Precautions**
- This application note is intended for professional laboratory research use only. The data and results originating from following the Application Note should not be used either in diagnostic procedures or in human therapeutic applications.
- Use and handle the material and instruments referenced according to the supplier’s/manufacturer’s instructions or product specifications accompanying the individual material and instruments.
- Dispose of all sample specimens, infected or potentially infected material in accordance with good microbiological practice. All such materials should be handled and disposed as though potentially infectious.
- Residues of chemicals and preparations are generally considered as biohazardous waste and should be inactivated prior to disposal by autoclaving or using bleach. All such materials should be disposed of in accordance with established safety procedures.

**Proprietary Information**
In accepting delivery of *iLite®* Assay Ready Cells the recipient agrees not to sub-culture these cells, attempt to sub-culture them or to give them to a third-party recipient, and only to use them directly in assays. *iLite®* cell-based products are covered by patents which are the property of Svar Life Science AB and any attempt to reproduce the delivered *iLite®* Assay Ready Cells is an infringement of these patents.
QUICK GUIDE
Quantification of functional IL-6 using iLite® IL-6 Assay Ready Cells

1. Sample dilution
   - Equilibrate reagents and samples to room temperature – do not thaw cells and substrate reagents at this stage
   - Dilute calibrators, controls and samples.
   - Add 40 µL of calibrators, controls and diluted samples to pre-assigned wells.
   - Thaw the cell vial in a 37°C water bath. Mix the cell suspensions with a pipette in order to ensure a uniform solution. Dilute the cells.
   - Add 40 µL diluted cells to each well.

2. Incubation 6 h
   - Incubate at 37 °C with 5% CO₂ for 6 hours.

3. Read plate
   - Equilibrate the plate to room temperature
   - Prepare the Firefly luciferase substrate according to the supplier’s instructions and add 80 µL per well. Mix. Protect the plate from light. After 10 min incubation read in a luminometer.
   - If appropriate, prepare the Renilla luciferase substrate according to the supplier’s instructions and add 80 µL per well. Mix. Protect the plate from light. After 10 min incubation read in a luminometer.
