# Automated parameters

DotDiver2.0 Stripholder

Ready to use cartridges

# Automated parameters

Compact, Integrated System for  
Automated Immunodot Assays

## Unique Features

### Flexible

Simultaneous performance of up to 24 different assays in an unprecedented short time.

### Easy

Simply load the test-trips, the reagent cartridges and the patient samples, press on and follow the test processing through a user friendly touch screen.

### Automatic

The tests are carried out fully automated according to established protocols. This will not bind lab capacities.

### AUTOMATIC RESULT GENERATION

Integrated reading of results from finalized test strips using onboard camera, special designed software calculates semi-quantitative and quantitative (Quantrix assay) results.

### Complete

The new built in components ensure reliable post assay handling and digital read out of the strips. Results will be reported to LIMS or can be printed out (optional).

### Fast

The DotDiver2.0 is much faster than comparable manual test execution. The new built in components ensure reliable post assay handling.

### Safe

Automated validation of the combination test strip - reagent cartridge by associated barcodes.

### Reliable

No pumps - no dead volume - no liquid handling. The standardized, automated test process ensures repeatable results.

### Space saving

Compact machine with small footprint.
