Intended Use
RUO — Research Use Only.

This product is used to qualitatively detect CD10 (CALLA) in normal and neoplastic formalin fixed paraffin embedded (FFPE) tissue sections in immunohistochemical detection methodology.

Description
Antibodies recognize a CD10 molecule or a common acute lymphoblastic leukemia antigen (CALLA). The use of antibodies allows to characterize subclasses of malignant lymphomas (lymphotoma from B-cell precursors, follicular lymphoma, Burkitt’s lymphoma), in which an increase in the level of expression of CD10 is noted. Antibodies to CD10 can be used as part of an antibody panel to detect clear cell or papillary carcinoma of the kidney, in which in most cases the expression of CD10 is significantly increased.

Antigen Full size recombinant protein

Reagent provided
This antibody is immunoglobulin IgG2b diluted in 10 mM Phosphate buffered saline (PBS), pH 7.4 containing 1% bovine serum albumin (BSA) and 0.05% ProClin™ 300 as antimicrobial agent.

Uses/Limitations:
For professional users.
For Research Use Only.
Do not use if reagent becomes cloudy.
Do not use past expiration date.
Contains ProClin™ 300 as a preservative (0.05% w/v)

Usage dilution
10-310036-7: Ready to Use
10-310036-01; 10-310036-05; 10-310036-1: Dilute 1:50 to 1:100 with Antibody Diluent (REF 12-310001) before use. Optimum dilution factor may vary depending on the specimen and preparation process and should be determined by each individual investigator.

Epitope retrieval
Staining of formalin fixed, paraffin embedded tissue sections is significantly enhanced by pretreatment with Tris Buffer, pH 9 (REF 12-310003).

Staining procedure
Incubate this antibody with tissue section for 30-60 minutes at room temperature. Follow the instructions from the selected detection system.

Positive control tissue
kidney, follicular lymphoma, diffuse large B-cell lymphoma

Staining pattern
Membrane

Storage
Store at 2-8°C and in the dark. Do not use after expiration date.

Warning and precautions
Refer to SDS.
