

# EIA for Quantitative Determination of anti-Muscarinic Cholinergic Receptor 3 (M3)-Antibodies

## Introduction

Muscarinic cholinergic receptors, or mAChRs, are acetylcholine receptors that form G protein-receptor complexes in the cell membranes of certain neurons and other cells. Autoantibodies against M3 AChR are significantly elevated in patients suffering from chronic fatigue syndrome (CFS) / myalgic encephalomyelitis (ME). Muscarinic acetylcholine receptor 3 (M3) autoantibodies are present in a subset of 20-30% of chronic fatigue syndrome patients.

The CellTrend anti-muscarinic cholinergic receptor 3 (M3)-antibody EIA is designed for the determination of antibodies against the muscarinic cholinergic receptor 3 (M3) in serum.

## Principle of the assay

The CellTrend muscarinic cholinergic receptor 3 (M3)-EIA is an antibody screening test. M3 receptor has been pre-coated onto a microtiter plate. During the first incubation the anti-muscarinic cholinergic receptor 3-antibodies of the samples are immobilised on the plate. The autoantibodies are detected with a POD labeled anti-human IgG antibody. In the following enzymatic substrate reaction the intensity of the colour correlates with the concentration and/ or avidity of anti-muscarinic cholinergic receptor 3-antibody.
